

Luis Anibal Olivares Zarraga

Valencia, Venezuela • [linkedin.com/in/anibaloz](https://www.linkedin.com/in/anibaloz) • +584265469183 • olivaresluisanibal@gmail.com

Software Developer with expertise in leading the frontend development lifecycle of high-impact products. Specialized in translating business objectives into scalable, high-performance technical architectures. Passionate about driving technical excellence and continuous improvement within agile teams.

PROFESSIONAL EXPERIENCE

Zeleri

Frontend Developer

Santiago, Chile • Remote

Nov 2022 – Present

- Designed and developed robust and scalable frontend applications using Next.js and TypeScript, establishing high standards for code quality, performance, and maintainability.
- Implemented critical business flows, including comprehensive payment systems and user onboarding processes, ensuring a smooth and reliable user experience.
- Built and maintained back-office systems that significantly optimized internal workflows, increasing the team's operational efficiency.
- Actively supported backend development by creating and maintaining performant services in Go, which enabled a more effective frontend-backend integration and expanded the platform's capabilities.

Cobuild

Full-Stack Developer

Miami, EE.UU • Remote

Sep 2021 – Nov 2022

- Successfully developed and delivered over 6 web applications for a diverse client portfolio.
- Led the end-to-end development of applications, implementing both frontends with React/NextJS and backends with Node.js and the 8base platform.

EDUCATION

Continuous and Self-Taught Learning

I maintain my training as a self-taught developer through platforms like Platzi, Udemy, and active participation in technical communities, using my personal projects as a testing ground for new technologies.

My main projects are:

- [windows-cv](#): An interactive portfolio inspired by the Windows 7 interface, where I showcase small personal projects and more information about myself.
- [GuessTheAnime.app](#): A project with multiple minigames where users guess anime series through visual and audio clues; a full-stack development with over 15k visits.

ADDITIONAL SKILLS

- Adaptability and quick learning in dynamic technological environments
- End-to-end product development (from ideation to deployment)
- Native Spanish and B2 English
- Agile Methodologies
- UX/UI Design
